

## Clinical Make-up Day

1. Watch *pediatric* videos in S82 Watch 6 videos, or 3 hours worth.

Write a short blurb (5-6 sentences on each video: was it good and why, or not good and why, was it helpful or not helpful, interesting points you discovered.

Most videos are 30 minutes. If you watch a 60 minute video, consider that 2 videos.

There are many good videos. Please ask Marge to show you a list of what is available and choose videos that are suitable to your needs.

2. Spend 2 hours in the lab reviewing and practicing your skills. Please ask Jean to sign a paper documenting that you were there and completed the expected time. (Don't forget the syringe pump and IVPB practice).
3. Complete 2 Pediatric Development Sheets: **ONLY** the Expected Play and Expected Growth & Development sections. This means: Physical, Intellectual, Psychological, Moral and Safety. Please do it on 2 age groups that you *haven't* done an assignment on yet!
4. Do 1 complete NCP on a Pediatric issue. This means: Diagnosis, Goals (short and long-term), and Interventions (5).

Please do not waste your time in the lab. Please check in with Jean and Marge, telling them you are in the lab for a clinical make-up day. Make it a worthwhile learning opportunity.
